

## Safety Rules: Pre-Use Checks of Slasher

**Revision No:**

1

**Date effective:**

July 2012

**Revision date:**

July 2015

### Purpose

This document outlines the pre-use check on a slasher.

### Scope

This document applies to all authorised maintenance workers, deemed competent by their supervisor.

### Procedure

Before using slasher the intending operator should check the slasher for:

1. Conditions of blades and retaining bolts.
2. Blades should be checked for excessive movement and wear.
3. Any other obvious faults that could present a danger during the use of the slasher.
4. If any of these faults are found the slasher should not be used and tagged "out of service". The problems should then be reported immediately to Supervisor for repairs.
